# FiberGuide® Fiber Management Systems

## Introduction

### The Industry's Most Comprehensive Optical Raceway System

The FiberGuide® fiber management systems offer the greatest breadth of optical raceway products in the industry. FiberGuide systems add greater flexibility and drive down installation time to ensure a smooth deployment.

FiberGuide is a raceway system designed to protect and route fiber optic patch cords, multi-fiber cable assemblies and intrafacility fiber cable (IFC) to and from fiber splice enclosures, fiber distribution frames and fiber optic terminal devices. FiberGuide ensures a two-inch minimum bend radius is maintained throughout the system. Tool-less, Snap-Fit™ junction options significantly reduce the amount of time required for installation.

The FiberGuide system is a complete set of products designed and manufactured to ensure total off-frame protection and ease of use. Basic components include horizontal and vertical straight sections, horizontal and vertical elbows, downspouts, junctions and numerous support hardware and flex vertical kits.

Available in a variety of sizes:

**2x2** – Ideal for smaller installations or for vertical routing of a maximum of four hundred 2 mm fiber optic patch cords. All 2x2 FiberGuide products are shipped with covers.

**2x6** – Designed for height restricted environments, this robust system provides the same support and system flexibility of the traditional 4-inch-high system while saving 2 inches of overhead space. It features a maximum capacity of 1,200, 2 mm patch cords.

**4x4** – Features the maximum capacity to support 1,600, 2 mm patch cords. It has been engineered to allow straight sections to be self-supporting over a span of up to 1.83 m (6 feet).

**4x6** – Features the same benefits of the 4-inch system and a maximum trough capacity of 2,400, 2 mm patch cords.

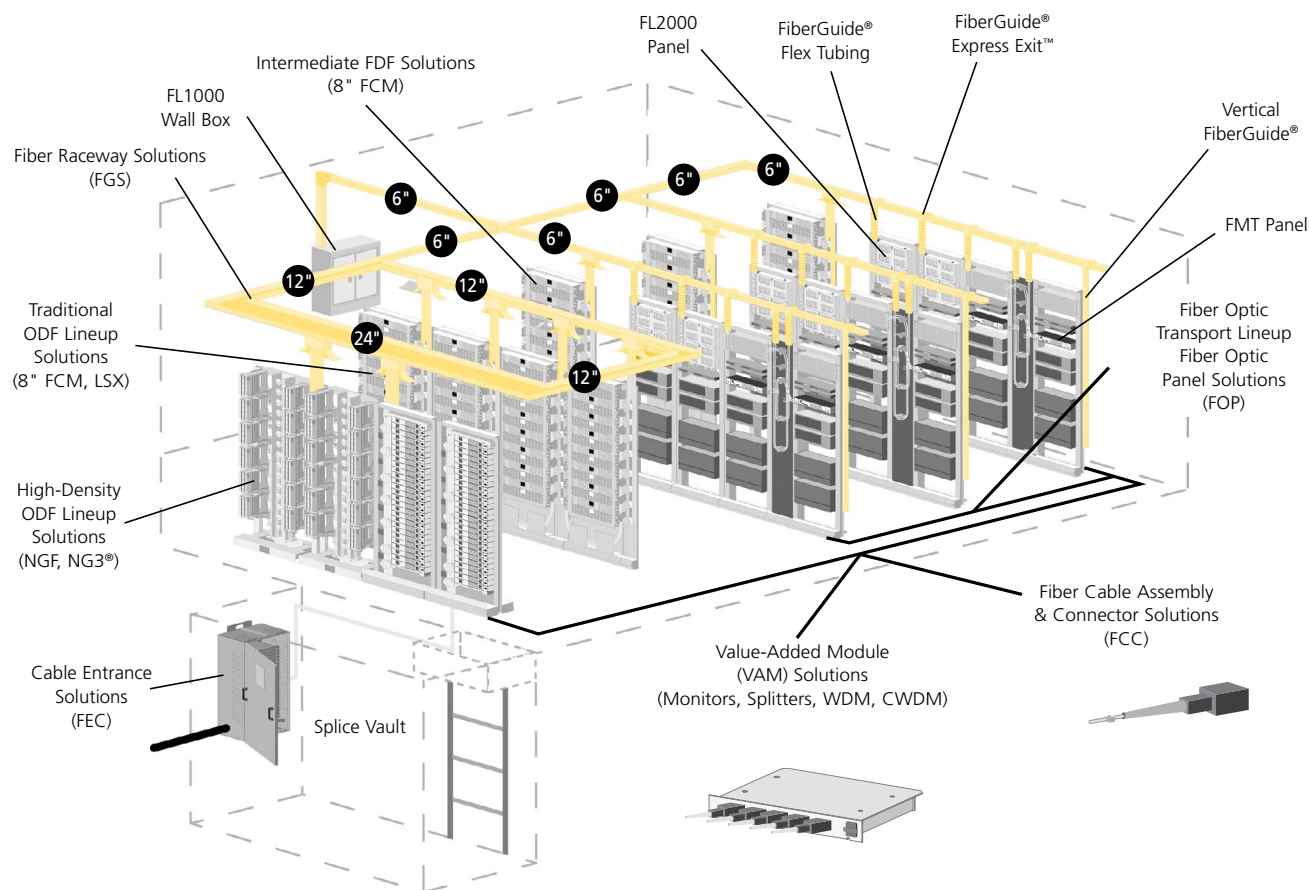

**4x12** – The 12-inch-wide trough has a maximum capacity to support nearly 5,000, 2 mm patch cords. Perfect for runs over fiber frame lineups and perimeter routes.

**4x24** – The 4x24-inch system is the ultimate raceway solution to securely route and protect patch cords over high-density optical distribution frames including CommScope's Next Generation Frame (NGF) and Next Generation 3 Frame (NG3®). Designed for maximum capacity, this robust system provides the same support and flexibility as the traditional 4x12-inch system while doubling capacity.

# Examples of FiberGuide® Integration

## FiberGuide® Materials Product Statement

The FiberGuide fiber management system is a UL-listed (E151158) general purpose fiber optic raceway system. All FiberGuide products are manufactured from flame-retardant materials. No FiberGuide system parts contain PVC. The table summarizes the fire-resistant properties of FiberGuide straight sections, molded parts and flex tube.

	Raw Material Meets UL Requirement	Finished Product Meets UL Requirement
FiberGuide Straight Sections (All FiberGuide Systems)	Flame rated: UL94V-0	UL94V-0 and UL2024
FiberGuide Molded Fittings (All FiberGuide Systems)	Flame rated: UL94V-0	UL94V-0 and UL2024
FiberGuide Flex Tube (2")	Flame rated: UL94V-0	UL2024
FiberGuide Flex Tube (1")	Flame rated: UL94V-0	UL2024
FiberGuide Flex Tube (7/8")	Flame rated: UL94V-2	UL2024

Note: FiberGuide flex tube complies with the National Electrical Code (NEC) Article 770-51 and Underwriters Laboratory UL2024 requirements for General Purpose Fiber Optic Raceways.

# Introduction - Innovative Products

## Snap-Fit™ and Hinged Cover Options

To drive down valuable installation time, FiberGuide systems include tool-less Snap-Fit™ and hinged cover options. Featuring simple, durable molded hardware, these covers install in minutes and require no tools.

The hinged cover option provides easy access, enabling installers and technicians to deploy the product quickly and easily. In addition, the covers do not need to be fully opened for maintenance.

Hinged Cover System

## Snap-Fit Junction

The Snap-Fit Junction is the industry's first and only completely tool-less junction. No additional tools are needed for installation or removal. Quick and easy to install, the FiberGuide Snap-Fit Junction saves valuable time and money.

## Express Exits™

The FiberGuide system features a number of innovative Express Exit™ options: Low profile, 2-inch, 4-inch, 6-inch and 12-inch options round out this innovative product line, designed to meet your most demanding network requirements. By simply securing an Express Exit to the sidewall of a FiberGuide straight section, jumpers can be permanently or temporarily routed to the fiber optic terminal (FOT) equipment or fiber frames. No cutting is required. Positioning a drop with a member of the Express Exit family greatly simplifies installation, protects the integrity of existing fibers and increases the overall flexibility of the raceway system.

Express Exit™ Family

## Raceway Reconfiguration Solutions

Three FiberGuide products facilitate easy on-site raceway reconfigurations. Available for the 4x4, 4x6, 4x12 and 4x24\* systems, the cut-in T, the expandable straight section and insertable downspout offer the required flexibility to optimize raceway systems in retrofit applications without jeopardizing the integrity of existing cables.

\*Expandable straight section not available for 4x24 system.

Cut-in T

Expandable Straight Section

# Introduction - Features and Benefits

## Features & Benefits

### Speed of Installation

FiberGuide® systems feature a variety of products that allow for quick and easy installation. Express Exit™ drops as well as tool-less products including Snap-Fit™ junctions, snap-on covers and hinged cover options save valuable time for installers.

### Speed of Deployment

The Express Exit system enables new drops to be added or removed quickly and easily. A drop can be added into a fully loaded raceway in seconds—without cutting.

### Raceway Flexibility

FiberGuide features over 150 support structures, over 200 fittings, multiple drop options and several other components to suit any application you create.

### Fiber Protection

CommScope's expertise translates into maximum protection for your network. Two-inch minimum bend radius is maintained throughout the system regardless of the raceway size.

### Strength and Durability

100% raceway reliability—stands up to any challenge.

# Applications - Combining System Parts

A combination of components from the various sized raceway systems typically comprise overhead FiberGuide® systems. Adapters are used to make the transition between sizes. An example of an overhead system that combines many of CommScope's FiberGuide systems can be seen below.

## Applications - Downspout Drop Options

A downspout drop is recommended over optical distribution frame lineups. The rigid 2-inch drop, 2-inch flex tube and 2-inch flex vertical option are three methods for directing fibers out of overhead FiberGuide® downspouts and into optical equipment bays. The rigid system is recommended because it offers excellent bend radius control and ensures a quality fiber backbone installation.

2x2 Rigid Drop Option

2" Flex Tube Drop Option

2" Flex Vertical Drop Option

## Applications - Express Exit™ Drop Options

An Express Exit is recommended over active equipment racks or cabinets. The rigid 2-inch drop option, 2-inch flex tube and 2-inch flex vertical option are three methods for directing fibers out of overhead FiberGuide® downspouts and into optical equipment bays. The rigid system is recommended because it offers excellent bend radius control and ensures a quality fiber backbone installation.

# Applications - Trumpet Flare Options

The trumpet flare is recommended at the bottom of a downspout when directing fibers into a fiber distribution bay. Trumpet flares provide bend radius protection and allow for a large number of fiber patch cords to transition into a fiber bay. A 4x4 trumpet flare is used for the 4x4 and 4x6 downspouts and a 4x6 trumpet flare is used for the 4x12 downspout.

Horizontal T and Trumpet Flare

Downspout with Trumpet Flare

When attaching a straight section or fitting to the exit of a 4x4 or 4x6 downspout, the FGS-MJWR-A junction must be used. This junction is only required to connect the vertical part, the FGS-MFAW-x junction can be used to connect the horizontal parts.

Shown Assembled

Exploded View

## Applications - 4x24-Inch Island T

The 4x24 Island T with 12-inch exit is designed to be used over the NGF, NG3® or any high-density fiber frame. The 4x24 Island T, a horizontal T with spool and factory-installed trumpet flare, channels fiber directly into the vertical cableways below.

4x24 Island T  
(Shown with support brackets over an NGF frame.)

## FiberGuide FlexExit

FiberGuide flex exit was designed to ensure a precise fiber drop from the raceway system into CommScope's NG4access optical distribution frame (ODF) or other high-density frame solutions. It easily installs on the sidewall of the existing raceway system, and promotes 4, 6 or 12 inch fiber drops. The FiberGuide flex exit easily adjusts vertically, side-to-side and forward for precise alignment with the ODF equipment.

Rear Fiber Entry for Cross-Connect Applications

Dual Front Fiber Entry for Interconnect Applications

# Applications - Raceway Reconfigurations

## Cut-in T, Fitting and Fixture

The innovative cut-in T fitting and fixture enable on-site raceway modifications without jeopardizing the integrity of installed fibers. Available in 4-, 6-, and 12-inch widths, the cut-in T fitting can be retrofitted to any installed 4-, 6-, 12-, and 24-inch straight section using the cut-in T fixture and the hardware supplied with the fitting. No special tools are required.

Fixture attached to sidewall of raceway

Fixture protects cables during cutting of sidewall

Fitting fills gap left by removed sidewall

Supplied hardware secures fitting to raceway and completes installation

# Applications - Raceway Reconfigurations

## Expandable Straight Sections

The expandable straight section simplifies installation and enhances the overall flexibility of the raceway system. The innovative straight section also provides an access point for future reconfigurations. Available in 4-, 6-, and 12-inch widths, the expandable straight section reduces the installation time necessary to connect opposing runs and provides continuous support for patch cords.

Raceway system with gap between opposing runs

Expandable straight section extends to connect runs

Completed installation

# Applications - Supporting Overhead Systems

A variety of support kits are available for each FiberGuide® system. Whenever possible, FiberGuide support kits should be attached to existing hardware (cable racks, digital cableways, existing threaded rods or equipment racks).

## 2x6, 4x4, 4x6 Systems

## 4x12 System

# Applications - Supporting Overhead Systems

## 4x12 and 4x24 Systems

The straight sections on the 4x12 and 4x24 FiberGuide® system are exceptionally strong, making frequent placement of supports beneath them unnecessary. Whenever possible the supports should be placed under the fittings using the mounting bosses as shown (photos 1 and 2). This placement provides the strongest system and requires the least amount of support hardware to be used. Occasionally it is not possible to attach the support bracket to the mounting bosses on the fittings; in those instances the variable fitting support locator can be installed on the bottom of the fitting, allowing the support to be attached anywhere along the fitting bottom (photos 3, 4 and 5). When combining several straight sections, it is recommended that support brackets are installed on both sides of each junction.

Typical 4x12 system installation over a Next Generation Frame Line-up

Variable Fitting Support Locator

# Patch Cord Densities

## Recommended and Maximum Patch Cord Densities

Recommended capacity takes into consideration random jumper placement into the FiberGuide® system. Maximum density refers to the maximum number of fiber jumpers in a given cross-section of a FiberGuide installation.

### Recommended/Maximum Density

1.2 mm Patch Cords (per in²)	1.5 mm Patch Cords (per in²)	1.7 mm Patch Cords (per in²)	2.0 mm Patch Cords (per in²)	3.0 mm Patch Cords (per in²)

## Straight Section and Junction – 2" H x 2" W

### Straight Section

The 2x2 straight section is a U-shaped trough that provides a protective raceway for optical fibers. Available in 6-foot lengths, the straight section carries fibers horizontally throughout the system. It can also be installed vertically when routing around obstructions. A warning label indicating caution around fiber optic cable is included with each junction kit.

## Low-Profile Express Exit™

Designed for low-ceiling or height restricted environments, the Express Exit for the 2x6 FiberGuide system extends only two inches above the straight section sidewall. The Express Exit accommodates up to 150 (3 mm) patch cords, includes removable rear cable guides for additional cable management, and features a 2x2 exit opening. It is designed specifically for the 2x6 FiberGuide system and should not be used on any other FiberGuide system.

## Straight Section and Junction – 2" H x 6" W

### Straight Section

The unique four-channel design of the 2x6 FiberGuide® straight section allows the standard system to be attached to the support structure without the need to cut or drill any holes within the trough. This ensures that the patch cords will not come in contact with any screw heads or bolts.

## Straight Section – 4" H x 12" W

The unique nine-channel design of the 4x12 FiberGuide® straight section provides unmatched strength and allows the attachment of support structure without the need to cut or drill holes within the raceway. This ensures that the patch cords will not come in contact with any screw heads or bolts, an important consideration in 4x4, 4x6, and 4x12 systems where higher cable counts apply increased pressure on the patch cords at the bottom of the raceway.

The 4x12 system covers feature a snap-on design. This allows the cover to be used in environments with limited headroom. Two 3-foot cover sections come with each order, making it easy for one person to remove the covers. Each cover kit includes a tether kit. The straight section covers are designed to be placed over the 4x12 downspouts, speeding installation time by reducing the number of measurements and cuts that need to be made.

## Straight Section, Snap-Fit™ Junctions and covers – 4" H x 24" W

### Straight Section

The unique double wall channel design of the 4x24 straight section provides exceptional strength and durability for high fiber count applications and allows the standard system to be attached to the support structure without the need to cut or drill any holes within the trough. The six channel design ensures that the patch cords will not come in contact with any screw heads or bolts, an important consideration in 4x24 systems where higher cable counts apply increased pressure on patch cords at the bottom of the trough.

# FiberGuide FlexExit

FiberGuide raceway systems offer the greatest breadth of optical raceway products in the industry. FiberGuide systems add greater flexibility and drive down installation time to ensure a smooth deployment. It is designed to protect and route fiber optic patch cords, multi-fiber cable assemblies and intrafacility fiber cable (IFC) to and from fiber splice enclosures, fiber distribution frames and fiber optic terminal devices.

FiberGuide flex exit was designed to ensure a precise fiber drop from the raceway system into CommScope's NG4access optical distribution frame (ODF) or other high-density frame solutions. It easily installs on the sidewall of the existing raceway system, and promotes 4, 6 or 12 inch fiber drops. The FiberGuide flex exit easily adjusts vertically, side-to-side and forward for precise alignment with the ODF equipment.

## Benefits

- Accommodates large fiber drops into high-density optical distributions frames
- Eliminates the need for custom engineering of raceway
- Accommodates large 12" and 24" raceway systems
- Increases flexibility of existing 12 or 24" raceway systems
- Provides optimal bend radius protection
- Durability built to provide long-lasting protection for your network

Rear Fiber Entry for Cross-Connect Applications

Dual Front Fiber Entry for Interconnect Applications

### Flex Exit Kit

Includes molded flex exit, sliding expansion plate and misc. support and configuration hardware. Trumpet flare or 90° down elbows must be purchased separately (see below).

### Cut-in Jig

The cut-in jig provides a protective guide to remove FiberGuide side wall to install the flex exit. The cut-in jig also provides a protection guide for preparing the FiberGuide raceway for cut-in depths applications.

# Express Exit™ Family

## For 4x4, 4x6, 4x12, and 4x24 Systems

The patented\* Express Exit™ family accommodates various raceway environments and applications.

By simply securing an Express Exit to the sidewall of any 4x4, 4x6, 4x12, or 4x24 FiberGuide® straight section, jumpers can be permanently or temporarily routed to fiber optic terminal (FOT) equipment below. No cutting of the FiberGuide system is required. Positioning a drop with a member of the Express Exit family greatly simplifies installation, protects the integrity of fibers already present in the raceway, and increases overall flexibility of the raceway system. All Express Exits guarantee 2-inch bend radius protection.

Express Exit Family

Express Exit Style	Height Above Sidewall	Exit Opening	3 mm Patch Cord Capacity	2 mm Patch Cord Capacity	Hinged Rear Cover	Exit Fin Inserts
2-Inch Express Exit	4 "	2" x 2" 1	150	350	No	No
Low-Profile Express Exit	2 "	2" x 2" 1	150	350	No	No
4-Inch Express Exit	4 "	4" x 4" 2	300	700	Yes	Yes

<sup>1</sup>Accepts all standard 2x2 " attachments.  
<sup>2</sup>Accepts all standard 4x4 " attachments.

### 4-Inch Express Exit™

The 4-Inch Express Exit is designed to distribute and manage medium cable counts to FOT or ODF equipment. It features a 4-inch by 4-inch exit opening to accept all standard 4x4 downspout attachments and includes insertable exit fins and removable rear cable guides for additional cable management.

4-Inch Express Exit

See page 35 for 4-Inch Express Exit downspout attachments.

2-Inch Express Exit

## Low-Profile Express Exit™

Designed for low-ceiling or height-restricted environments, the Low-Profile Express Exit features a front-removable cover and extends only 2 inches above the FiberGuide® straight section sidewall. It also includes removable rear cable guides for additional cable management.

(FGS-MEXP-LP-A/B/F; fits 4x4, 4x6 and 4x12 systems; shown attached to 4x4 straight section)

Low-Profile Express Exit Designed Exclusively for 2x6 System  
(FGS-MEXP-LP-G shown attached to 2x6 straight section)

# FlexVertical kits

FlexVertical is a vertical routing kit that allows easy and safe routing of fiber cables & cords from the horizontal tray to the cabinet or rack. FlexVertical consists of configurable components that snap together and install onto an existing FiberGuide exit (such as an ExpressExit or traditional downspout).

- **More flexibility:** the rotation is controlled within 1 degree increments with a lock-in mechanism for stability and to avoid unwanted movement.
- **Tool-less installation (no hardware):** FlexVertical connects to the exit via a “snap-on” mechanism requiring minimal hardware making it easy to install. Easier access to patchcords is provided via an easy latching mechanism.
- New, trumpet style exit to the vertical space
- The FlexVertical kits easily mount to a rack or inside a cabinet with simple mounting hardware, (ideal for in-cabinet solutions).
- Inside the FlexVertical raceway, fiber is well protected with minimal risk of over-bending or pinching and is easily accessible.
